

LAB 4F: This model is big enough for all of us!
Response Sheet

Directions: Record your responses to the lab questions in the spaces provided.

Building better models

Divide & Conquer

- **Do you think that a movie's runtime is the only factor that goes into how much a movie will make? What else might affect a movie's gross?**

Including more info

- **Does this new model make more or less accurate predictions? Describe the process you used to arrive at your conclusion.**

- **Write down the code you would use to include a 3rd variable, of your choosing, in your `lm()`.**

Own your own

- **Write down which other variables in the movie data you think would help you make better predictions.**
 - **Are there any variables that you think would not improve our predictions?**

 - **Assess whether your model makes more accurate predictions for the test data than the model that included only runtime and reviews_num.**

- **With your neighbors, determine which combination of variables leads to the best predictions for the test data.**
