| | LAB 4B: What's the score? Response Sheet |
| Direct | tions: Record your responses to the lab questions in the spaces provided. |
| Previ | ously |
| Predi | ctions using a line |
| Make | your predictions |
| Sums | s of differences |
| • w | /hat do the residuals measure? |
| | |
| • р | escribe and interpret, in words, what the output of your accuracy summary means. |
| | Irite down why adding positive and negative errors together is problematic for assessing rediction accuracy. |
| | squared error compare your MSE with a neighbor. Whose line was more accurate and why? |
| Regre | ession lines |
| Plotting regression lines | |
| Predicting with regression lines | |
| The n | nagic of Im() |
| · c | ompare the MSE of the linear model you fitted using add_line() to the MSE of the linear |

- model obtained with 1m(). Which linear model performed better?
- Ask your neighbors if any of their lines beat the 1m line in terms of the MSE. Were any of them successful?
